PREFACE

Welcome to the 7th International Conference on Public Health. This conference is hosted by Universitas Sebelas Maret, in Solo city, Indonesia. It is organized by the Master's Program in Public Health, Universitas Sebelas Maret. This is the 7th of the International Conference on Public Health since 2016 and yet it is the first to be conducted online.

The theme of this meeting is “*Childhood Stunting, Wasting, and Obesity, as the Critical Global Health Issues: Forging Cross-Sectoral Solutions*”. But beforehand, I would like to greet warmly all of the participants of this meeting. It is my privilege and my pleasure to see all of you albeit virtually. I am pleased to acknowledge and welcome the honorable invited officials, the respectable guests, the distinguished international and national speakers, and the admirable participants.

Specifically, I would like to express appreciation to Prof. Ahmad Yunus the Vice Rector of Academic Affairs, who is on behalf of the Rector of Universitas Sebelas Maret, to open this conference officially. Then, I would like to extend my gratitude to all of the international and national speakers who have spared their valuable time to attend this online conference. Our distinguished invited speakers to whom we will listen their presentation are as follows:

1. Prof. Sandra Lopez Arana from the Department of Nutrition, the University of Chile, in Santiago, Chile
2. Prof. Linda Adair from the Department of Nutrition, Gillings School of Global Public Health, the University of North Carolina, in Chapel Hill, North Carolina, USA
3. Prof. Jenny Ruducha, the Director of the Braintree Global Health, in Vancouver, British Columbia, Canada.
4. Prof. Ashir Ahmed from the Department of Advanced Information Technology, the Kyushu University, in Fukuoka, Japan
5. Prof. Michael Dibley from the Sydney School of Public Health, the University of Sydney, in Sydney, Australia
6. Prof. Sanjay Mohanty from the Department of Fertility Studies, the International Institute for Population Sciences (IIPS), in Mumbai, India
7. Prof. Adang Bachtiar from the Faculty of Public Health, Universitas Indonesia, in Jakarta, Indonesia, who is also the Chairman of the Advisory Board, the Indonesian Public Health Association (IAKMI).
8. Dr Hanung Prasetya from the School of Health Polytechnics, Ministry of Health, in Solo, Indonesia, who is also the Secretary of this conference.

Next, I would like to acknowledge the important participation of more than 667 participants coming from 5 countries including Myanmar, Taiwan, Japan, Malaysia, and Indonesia. These participants are mainly graduate students, and the remaining are academicians, public health and nutrition professionals, clinicians, and health researchers.

More than 74 institutions are participating in this meeting, including universities, schools of health sciences, schools of health polytechnics, schools of midwifery, hospitals, and district health offices.

Due to time constraint, I would mention just two of them with the largest contingents, they are the University of Indonesia in Jakarta and the University of Aisyiah in Yogyakarta. As I mentioned before the theme of this conference is “*Childhood Stunting, Wasting, and Obesity, as the Critical Global Health Issues: Forging Cross-Sectoral Solutions*”. This conference aims to discuss the current problems of childhood malnutrition (including stunting, wasting, overweight, and obesity), their causes and consequences. It also aims to discuss and provide recommendations of the multisectoral and transdisciplinary solutions to childhood malnutrition. This theme is chosen not only because of the double burden of childhood malnutrition that can lead to a damaging long-term impact but also because it may emerge as an adverse impact of Covid-19 pandemic.

The conference is conducted in two days. It has 3 programs including: (1) Symposium; (2) Workshop; and (3) Oral Presentation of the participant research work. The oral presentation is divided into five areas including: (1) Epidemiology and Public Health; (2) Health Promotion and Behavior; (3) Maternal and Child Health; (4) Health Policy and Management; and (5) Medicine.

Finally, I wish you all could benefit much from this conference. Please enjoy yourself to listen, present, discuss, get inspired, and recommend. Thank you.

Surakarta (Indonesia), November 18-19, 2020.

Prof. Bhisma Murti
Chair, 7th International Conference on Public
Health (7th ICPH)

TOPIC I: EPIDEMIOLOGY AND PUBLIC HEALTH

Patient Characteristics with the Drugs Provocation Test in Sanglah Hospital from 2017 to 2018 <i>I Kadek Adi Paramartha, I Ketut Suadarmana</i>	46
Hypertension Risk Factors Among Obese Adolescent <i>Reny Tri Febriani, Nining Loura Sari</i>	47
Analysis of the Causes of Death in Indonesia Due to Accident Based on the Sample Registration System from 2014 to 2016 <i>Retno Widyastuti, Anhari Achadi, Yuslely Usman, Tita Rosita, Merry Lusiana</i>	48
Covid-19 Prevention in Micronutrients Perspective: A Narrative Review <i>Febry Istyanto</i>	49
The Association Between Patient Satisfaction, Nutrition Expert Consultation Practice, and the Quality of Nutrition Service at Inpatient Ward, Hanau Hospital <i>Atet Kurniadi, Pujiyanto</i>	50
Determinants of Language Development among 1 Year Old Children in Malang, East Java <i>Yuniastuti Ni Putu Ayu Krisna, Tarsikah, Widyana Erni Dwi</i>	51
Disability Perception in Sexuality and Reproductive Health Needs: a Scoping Review <i>Youlenta Ernesontha, Nurul Kurniati, Mufdlilah</i>	52

Burden and Quality of Life of Dependent Elderly Caregivers in Pakuncen Village Yogyakarta <i>Herose Cendrasilvinia, The Maria Meiwati Widagdo, Widya Christine Manus</i>	53
The Correlation between Secretary Phospholipase A2 Type IIA Levels and Mean Platelet Volume among Type 2 Diabetes Mellitus Patients <i>Woro Ayu Sekararum, Nurfitri Bustamam, Hikmah Muktamiroh, Harli Amir Mahmudji</i>	54
Determinant of Malaria Incidence in the Coastal Area of East Lombok, West Nusa Tenggara <i>Muhammad Kazwaini, Chatarini U. Wahyuni</i>	55
Risk Factors of Malaria Cases among Children Under Five in Bonggo Community Health Center, Sarmi, Papua Province <i>Lalu Irwandi, Hari Basuki Notobroto</i>	56
The Correlation between Social Determinants and Environmental Condition with Measles Cases among Infants in Padang, West Sumatera <i>Iyana Putri, Adang Bachtiar</i>	57
The Relationship between Sun Exposure, Hat, and Pterygium Disease among Fisherman in Bengkulu <i>Dwi Putri Sulistiya Ningsih, Ida Rahmawati</i>	58
Gender and Occupation on Fine Motor Skill among Infants Aged 6-11 Months <i>Catur Retno Lestari</i>	59
The Influence of Social Capital, Parenting, and Environment on Quality of Life among 2-4 Years Old Children <i>Heni Puji Wahyuningsih, Bhisma Murti, Eny Lestari, Reviono</i>	60
A Compliance on Profilactical as a Dominant Factor Towards Filariasis Events in Jambi Province as a High Endemis Regency <i>Ummi Kalsum, Jumati, Damris Muhammad</i>	61
Determinant Factors of Covid-19 Transmission among of Health Personnel: A Systematic Review <i>Wenny Wiharsini, Wahyu Sulistiadi</i>	62
Development of Surveillance for Stunting in Parigi-Moutong, Central Sulawesi	63

*Revy Tilaar, Asmarafia, Kurniati, Ismi Maudilah Hardianti,
Rossi Sanusi*

The Effect of Infection Prevention and Control Link Nurse Supervision and Resource Availability on Paramedic Hand Hygiene at Hanau Hospital, Seruyan District, Central Kalimantan <i>Jhonferi Sidabalok, Pujiyanto</i>	64
Rubella Outbreak in School Age Children in Kulon Progo District, Yogyakarta <i>Siti Nurfadilah H, Riris Andono Ahmad, Sugiarto</i>	65
Factors Related to Malnutrition Events in Under-Five Children in Kabukarudi Village, East Nusa Tenggara <i>Nepriana Buta Rade, Theresia Puspitawati, Jati Untari</i>	66
The Influence of Behavior Factors on the Incidence of Syphilis in High-Risk Men in Public Health Centers, Medan, North Sumatera <i>Vicky Arfeni Warongan, Fazidah Aguslina Siregar, Etti Sudaryati</i>	67
Risk Factors of Covid-19 Transmission between Hospital Employess <i>Siti Ulfah, Cicilya Candi, Ede Surya Darmawan</i>	68
Analysis of Earthquake Preparedness Measures in Students at Elementary School, Denpasar, Bali <i>Yustina Ni Putu Yusniawati, Putu Inge Ruth Suantika</i>	69
A Cohort Study on the Primary Prevention of Stroke Incidence in Adult Population in Bogor, West Java <i>Woro Riyadina, Dewi Kristanti, Julianty Pradono, Ekowati Rahajeng, Yuda Turana</i>	70
Risk Factors for Mortality in Patients with Covid-19: A Systematic Review <i>Ratna Yustinawati, Anhari Achadi</i>	71
Nitrate in Groundwater and Health Risk Assessment: A Cross-Sectional Study in Three Villages in Tanah Merah District, Kelantan, Malaysia During Paddy Pre-Planting Season <i>Muhammad Syafiq N, Shaharuddin MS, Zaenal Abidin</i>	72
Analysis of Individual, Physical, and Psychosocial Risk Factors on Work-Related Skeletal Muscle Disorders in Workers in Tourism Sector: A Systematic Review <i>Muhammad Luthfi, Baiduri Widanarko</i>	73
The Obesity Prevalence in Navy Personal and Civil Servants at Lantamal X Jayapura	74

Yuli Arisanti, Janri Manullang

Multilevel Analysis of Factors Associated with Performance of Midwives in Integrated Antenatal Care Service in Pati, Central Java <i>Siti Marfu'ah, Irfana Tri Wijayanti, Ana Rofika</i>	75
Determinants of Knowledge About Covid-19 Transmission Prevention and Antenatal Care Visit in Gresik, East Java <i>Endah Mulyani, Sulastri, Zahrotul Hidayati, Khaulah Mujahidah</i>	76
Predisposing and Reinforcing Factors in Patients with Breast Cancer in Samarinda, East Kalimantan <i>Lia Kurniasari, Aji Mohammad Irfannur, Ayu Mardiana, Elvi Natalia, Erlinda Rara Sulviana, Nur Ainun Jariah</i>	77
Spatio-Temporal Analysis on Endemicity of Dengue Hemorrhagic Fever in Sragen District, Central Java <i>Wiwik Setyaningsih, Dodiet Aditya Setyawan</i>	78
Factors Associated with Stroke: Evidence from Indonesian Family Life Surveys 2015 <i>Trisakti Halimah Delima Sari, Vitri Widyaningsih</i>	79
Biopsychosocial Determinants of Quality of Life in Post Stroke Patients: A Multiple Logistic Regression Analysis <i>Maki Zamzam, Didik Gunawan Tamtomo, Vitri Widyaningsih</i>	80
Meta Analysis on Obesity and Diabetes Mellitus as Risk Factor Hypertension in Police and Military Personnel <i>Firman Pardosi, Setyo Sri Rahardjo, Yulia Lanti Retno Dewi</i>	81
Meta-Analysis: Gender and the Risk of Lower Extremity Amputation in Patients with Type 2 Diabetes Mellitus and Foot Ulcer <i>Anissa Eka Septiani, Bhisma Murti, Setyo Sri Rahardjo, Hanung Prasetya</i>	82
Biopsychosocial Determinants of Hepatitis a Outbreaks in Pacitan, East Java <i>Sugeng Retyono, Setyo Sri Rahardjo, Bhisma Murti</i>	83
Obesity and the Risk of Suicide in Adults: A Meta-Analysis <i>Hisyam Syafi'ie, Hanung Prasetya, Bhisma Murti</i>	84
Social Capital Phenomenology Study among People Who Treat a Mental Disorder Person	85

Adriesti Herdaetha, Aris Sudiyanto, RB Sumanto, Endang Sutisna Sulaeman, Wijaya Kusuma

Path Analysis on the Biopsychosocial Factors Influencing the Quality of Life of Elderly in Surakarta Central Java <i>Dwi Tour Kumalasari, Bhisma Murti, Vitri Widyaningsih</i>	86
The Effects of Family Support and Peer Support on the Quality of Life in Elderly in Jember, East Java <i>Malinda Capri Nurul Satya, RB. Soemanto, Bhisma Murti</i>	87
Factors Affecting Tertiary Preventive Behaviors among Patients with High Blood Pressure <i>Angga Ferdianto, Didik Gunawan Tamtomo, Endang Sutisna Sulaeman</i>	88
Application of Precede Proceed Model on Factors Affecting Depression Symptom in the Elderly: Evidence from Surakarta, Central Java <i>Zela Tunurrohmin, RB. Soemanto, Eti Poncorini Pamungkasari</i>	89
Biological, Social, and Economic Risk Factors of Child Tuberculosis in Surakarta Central Java: A Multiple Logistic Regression <i>Dyah Ayu Saputri, Yulia Lanti Retno Dewi, Bhisma Murti</i>	90
Biopsychosocial Determinants of Diabetes Mellitus Type 2: Evidence from Surakarta, Sentral Java <i>Anggi Putri Aria Gita, Isna Qadrijati, Bhisma Murti</i>	91
The Biopsychosocial Determinants of Quality of Life in Patients with Breast Cancer: A Multilevel Logistic Regression Evidence from Surakarta, Central Java <i>Rizka Amalia Dewi, Ambar Mudigdo, Eti Poncorini Pamungkasari</i>	92
Effect on Neuropsychiatric Disorders of Organophosphate Pesticides Exposure among Rice Farmers in Sukoharjo, Central Java <i>Ayu Laela Fitriyani, Setyo Sri Rahardjo, Bhisma Murti</i>	93
How Do Psychological, Nutritional Factors, and Ambient Smoke Exposure, Affect the Risk of Low Birth Weight?: A Path Analysis Evidence <i>Isne Susanti, Harsono Salimo, Yulia Lanti Retno Dewi</i>	94
Factors Associated with Hypertension among Adults in Magelang, Central Java <i>Wawan Diyantana, Dono Indarto, Bhisma Murti</i>	95

Length of Working and Low Back Pain in Health Workers: A Meta-Analysis <i>Muh. Syaiful Akbar, Bhisma Murti, Setyo Sri Rahardjo, Dono Indarto</i>	96
Effect of HIV Infection on Mortality in Patients with Tuberculosis in Asia: A Meta Analysis <i>Liza Laela Abida, Bhisma Murti, Hanung Prasetya</i>	97

EFFECT OF BALANCED DIET EDUCATION WITH MEDIA COMIC ON MODIFICATION OF EATING BEHAVIOR IN ADOLESCENTS AT MIDDLE SCHOOL, MALANG

**Rani Nurmayanti, I Nengah Tanu Komalyana,
Sugeng Iwan Setyobudi Maryam Razak**

Nutrition Department Malang State Health Polytechnic

ABSTRACT

Background: Obesity remains the main malnutritional problem globally. One of the contributing factors is the imbalance diet eating behavior. This study aimed to analyze the effect of balanced diet education with media comic on modification of eating behavior in adolescents at middle school, Malang, East Java.

Subjects and Method: This was a quasi-experimental with a pretest and post-test control group design conducted at Middle School, Malang, East Java, in November 2018. A sample of 64 students was randomized into two groups: (1) Experiment group that received diet education using media comic, and (2) Control group that received no intervention. The dependent variables were knowledge, attitude, and skill of eating behavior. The independent variable was diet education using media comic. The data were analyzed by Man-Whitney test

Results: After the intervention, the experimental group had higher mean of knowledge (Mean= 92.72; SD= 10.78), attitude (Mean= 83.23; SD= 18.13), and skill (Mean= 78.79; SD= 16.94) than the control group, including knowledge (Mean= 88.68; SD= 11.47), attitude (Mean= 87.60; SD= 8.60), and skill (Mean= 79.94; SD= 14.31), and it was statistically insignificant in each outcomes, ($p= 0.151$), ($p= 0.223$), and ($p= 0.770$) respectively.

Conclusion: Diet education with media comic is effective in improving knowledge, attitude, and skill of eating behavior in students, but it is not statistically significant.

Keywords: diet education, media comic, eating behavior, balanced diet

BACKGROUND

Obesity is currently an over-nutrition problem that was found at various ages, including toddlers, children, adolescents, adults, and the elderly. In 2008, it was found that 35% of the adult population in the world was obese, and 6.7% of the world's child population was overweight and obese in 2010. Obesity at the age of 0-18 years needs to be watched out because it will be at risk of suffering from obesity to adulthood (WHO, 2016).

Basic Health Research in 2007 showed that the prevalence of obesity in people aged ≥ 15 years was 19.10% consisting of 8.80%

overweight and 10.30% obesity. There was an increase in 2010 to 21.70% consisting of overweight 10.00% and obesity by 11.70% (Aryani, 2010). In 2013, the prevalence of obesity among adolescents aged 16-18 years was 7.30% consisting of fat 5.70% and obesity 1.60%.

Fifteen provinces with a prevalence of very fat above the national prevalence, including Bangka Belitung, Central Java, South Sulawesi, Banten, Central Kalimantan, Papua, East Java, Riau Islands, Gorontalo, DI Yogyakarta, Bali, East Kalimantan, North Sulawesi, and DKI Jakarta (Muwakidah, 2008).

Nur A (2012) study showed that learning media using pictorial comics can improve students' learning outcomes as seen from the gain scores, including moderate criteria, increase student activity, increase student interest, and get positive responses from students. This study aimed to analyze the effect of balanced diet education with media comics on modifying eating behavior in adolescents at middle school, Malang, East Java. This study's specific objectives were to analyze the obese adolescents' level of knowledge, attitudes, and skills in junior high schools in Malang City, examining the food intake of obese adolescents in one of the city's junior high schools.

SUBJECTS AND METHOD

1. Study Design

This was a quasi-experimental with a pretest and post-test control group design conducted at Middle School, Malang, East Java, in November 2018.

2. Population and Sample

A sample of 64 obese students was selected purposively into two groups: (1) Experiment group that received diet education using media comic, and (2) Control group that received no intervention.

3. Study Variables

The dependent variables were knowledge, attitude, and skill of eating behavior. The independent variable was diet education using media comics.

4. Study Instruments

The instruments used in this study were questionnaires, a weighing scale, and balanced nutrition comics.

5. Data Analysis

Univariate analysis was conducted to show the sample characteristics in frequency distribution. Bivariate analysis was conducted using Man-Whitney test.

RESULTS

1. Characteristics Sample

Measurement of the nutritional status of respondents in the obesity category was carried out based on the BMI index. Characteristics of the sample were described in Table 1.

Table 1. Characteristics Sample (categorical data)

No. of Junior High School, Malang	Number of Obese Students
No.3 Junior High School	10
No. 5 Junior High School	30
No. 8 Junior High School	24
Total	64

Table 1 showed the number of obese students in 3 Junior high schools in Malang City. The majority of obese students were in No. 5 Junior High School, as many as 30 students and the least were in No. 3 Junior High School as many as 10 students.

Table 2 showed the Man-Whitney test on differences in median knowledge, attitude, and skills between the intervention and control groups, both before intervention, after intervention, and the difference after-before intervention.

Table 2 showed that median of the knowledge after intervention between the intervention and control group different, it was not statistically significant ($p= 0.066$).

The effectiveness of the intervention was determined by comparing the difference in knowledge scores post-pre intervention. The difference in knowledge post-pre intervention in the intervention group (Median= 0; SD= 15.28) was smaller than the control group (Median= 0.02; SD = 16.25), and it was statistically significant ($p = 0.066$).

Median of the attitude after intervention between the intervention group and the control group was not different, and it was statistically insignificant ($p= 0.777$). Similar to the above, the effectiveness of the intervention was determined by comparing the difference in median attitude post - pre intervention. The difference in median atti-

tude post - pre intervention in the intervention group (Median= 0; SD= 14.44) was smaller than that of the control group (Median= 7.09; SD= 19.22), and it was statistically not significant (p= 0.777).

Median of skill after intervention between the intervention and control groups were not different, and it was not statistically insignificant (p= 0.668). Similar to the abo-

ve, the effectiveness of the intervention was determined by comparing the difference in median of skill after intervention and control. The difference in median skill post - pre intervention in the intervention group (Median= 12.50; SD= 25.81) was smaller than the control group (Median= 12.30; SD= 22.12), and it was statistically not significant (p = 0.668).

Table 2. The results of the Man-Whitney test on differences in median knowledge, attitude, and skills between the intervention and control groups, both before intervention, after intervention, and the difference after-before intervention

Information	Treatment	Control		Intervention		p
		Median	SD	Median	SD	
Knowledge	Preintervention	88.90	10.29	100	15.90	0.012
	Postintervention	88.90	10.70	88.9	12.00	0.890
	Post-pre intervention	0.02	16.25	0	15.28	0.066
Attitude	Preintervention	78.60	9.52	85.70	10.54	0.085
	Postintervention	85.70	16.88	92.80	9.95	0.236
	Post-pre intervention	7.09	19.22	0	14.44	0.777
Skill	Preintervention	75	16.99	75	17.83	0.731
	Postintervention	87.50	16.81	75	14.22	0.700
	Post-pre-intervention	12.30	22.12	12.50	25.81	0.668

DISCUSSION

The level of knowledge and attitudes of obese students was influenced by the education obtained during the learning period and the influence of the environment around young women. According to the stimulus-response theory of students' learning process, they take and combine responses by repeating them. The responses were obtained by giving a stimulus in education to the experimental group by giving comics for 3 weeks and without education for 3 weeks. With this learning process, students have not understood the material given or in the comics.

Baron (2004) stated that an attitude of growth begins with the knowledge that is perceived as a good or bad thing, then into internalization. This can mean that a good attitude and less formed from the component

of knowledge. It affects one's behavior in this case is the selection of a balanced diet.

The level of nutritional knowledge of a person affects attitudes and behavior in food selection. Increased knowledge, attitudes, and skills to interact with each other from distinctive patterns of behavior. Skills or actions will last if they were based on good knowledge and attitudes (Notoatmodjo, 2007). According to Bastable (2002), information acceptance through sensation can only be absorbed by 20%. The use of educational tools in the form of a food model helps students understand the educational material. So that it affects the skills of students in selecting food ingredients.

Based on the recall results, there were frequent consumption fried chicken and other fired foods. Subjects in this study rarely ate vegetables. From the results of mentoring

using comics for 3 meetings, some students experienced changes in their diet, such as replacing rice with bread, reducing the portion of rice in one meal, and eating vegetables. Apart from the intake factor, students only relied on sports lessons that were only once a week at school exercise.

In addition, the incidence of obesity in children is associated with the obese parents. According to Whitney and Hegarthy in Manurung (2009), genetics plays an important role in influencing a person's weight and body composition. If both parents are obese, the chance of their children obese was 75-80%. If one parent is obese, the probability is only by 40%. If neither of the parents is obese, the chance of obese children is relatively small (<10%).

The factors that influence eating behavior, according to Worthington-Roberts (2000) were the ease of obtaining fast food. Fast food is easy to find anywhere, especially in big cities. Examples of fast foods are fried chicken, burgers, and pizza. In general, these foods are rich in energy, fat, carbohydrates, and salt, but lacking vitamin A, vitamin C, folic acid, calcium, and fiber.

When there is a peak in growth, adolescents should often eat the amount according to their needs. Adolescent nutritional needs can use the NAR (Nutritional Adequacy Rate) based on age and sex. Unhealthy eating habits in large quantities during adolescence can eventually lead to obesity and degenerative diseases. Through health education in schools, adolescents are expected to know what to consume and what to avoid, and when to eat (Worthington-Robert, 2000).

Provision of balanced nutrition comic media with assistance can affect changes in dietary intake of carbohydrate and fiber sources, from those who initially rarely consume fiber-source foods, to increasing intake

of fiber sources. The limitations of this study was mentoring was not optimal due to the limited time of the research. The interview sections needed to conduct in more detail regarding the intake and diet of students, so that the factors that cause obesity in adolescents can be overcome.
