

ABSTRAK

Hubungan Antara Kepatuhan Tim Bedah Dengan Pelaksanaan *Time Out* Di Kamar Operasi RSUD Dr.Haryoto Kabupaten Lumajang. Adharatna Dwi Mayasari (2017). Skripsi. Program Studi DIV Keperawatan Malang, jurusan Keperawatan, Politeknik Kesehatan Kemenkes Malang, pembimbing (utama) Dr. Atti Yudiernawati, S.Kp., M. Pd., pembimbing (pendamping) Eka Wulandari, S.Pd.M.Pd.

Kata Kunci: Kepatuhan, Pelaksanaan *Time Out*, SSC

Kepatuhan tim bedah dalam melaksanakan *Surgical Safety Checklist* (SSC) utamanya fase *time out* merupakan bagian yang sangat penting demi tercapainya *patient safety* saat dilakukan tindakan operatif. Tujuan dari penelitian ini adalah menganalisis hubungan antara kepatuhan tim bedah dengan pelaksanaan *time out* di kamar operasi. Desain yang digunakan dalam penelitian ini adalah *cross sectional* dengan besar sampel penelitian yaitu 32 responden yang dilakukan dua kali observasi menggunakan teknik *total sampling* berdasarkan kriteria inklusi dan eksklusi. Metode pengambilan data dilakukan secara observatif terhadap kepatuhan tim bedah menggunakan pedoman WHO 2009 dan pelaksanaan *time out* menggunakan pedoman NPSG 2015. Pengolahan data dalam penelitian ini menggunakan distribusi frekuensi koefisien korelasi. Hasil observasi dari kepatuhan tim bedah menunjukkan sebagian besar responden memiliki kepatuhan yang baik (64%), sedangkan sebagian besar pelaksanaan *time out* adalah cukup (60%). Rekomendasi untuk peneliti selanjutnya diharapkan bisa meneliti hubungan antara pelaksanaan *time out* dengan beban kerja perawat.

ABSTRACT

Correlation between Compliance of Surgical Team and Implementation of Time Out in RSUD Dr.Haryoto Lumajang Operating Room. Adharatna Dwi Mayasari (2017). Thesis. DIV Nursing Study Program of Malang. Department of Nursing, Ministry of Health, State Health Polytechnic of Malang, Advisor 1 Dr. Atti Yudiernawati, S.Kp., M. Pd., Advisor 2 Eka Wulandari, S.Pd.M.Pd.

Keywords: *Compliance, Implementation of time out, SSC*

Compliance of surgical team in the implementation of SSC, especially in time out phase is a very important point for the sake of keeping patient safety when the surgery is on progress. The purpose of this research was to analyze the correlation between the compliance of surgical team and the implementation of time out in the operating room. The design used in this research was cross sectional with a large sample of research consisted of 32 respondents which was conducted twice with observation using total sampling technique based on inclusion and exclusion criteria. Methods of data collection was by observing the compliance the surgical team that based on WHO 2009 and implementation of time out based on NPSG 2015. Data processing in this research was using frequency correlation coefficient distribution. Observation result of the compliance of surgical team showed that most respondents had a good compliance (64%), while most of the time out implementation showed sufficient implementation (60%). It is recommended that the future researchers are expected to examine the correlation between implemetation of time out and workload of nurses.
