Rosyidah, Ainur. 2019. *Hubungan Dukungan Suami dengan Keteraturan Ibu Hamil dalam Kunjungan Antenatal Care (ANC) Trimester III di Puskesmas Kedungkandang Malang*. Skripsi. Program Studi Sarjana Terapan Kebidanan Malang, Jurusan Kebidanan, Politeknik Kesehatan Kemenkes Malang. Pembimbing Utama: Erni Dwi Widyana, SST., M. Kes. Pembimbing Pendamping: Annisa, SST., M. Kes.

ANC adalah salah satu indikator penting untuk ibu hamil dalam masa kehamilan. Keteraturan dalam kunjungan ANC dapat mendeteksi dini komplikasi-komplikasi pada masa kehamilan, sehingga akan tertangani lebih awal. Dukungan suami dalam keteraturan ANC sangat penting untuk mendorong ibu hamil rutin dalam melakukan kunjungan ANC secara teratur. Tujuan dari penelitian ini untuk mengetahui hubungan dukungan suami dengan keteraturan ibu hamil dalam kunjungan ANC trimester III di Puskesmas Kedungkandang Malang. Metode penelitian ini adalah analitik korelasi dengan pendekatan *cross sectional*. Sampel penelitian ini sebanyak 43 responden dengan teknik *Purposive Sampling* dari seluruh jumlah populasi. Instrumen penelitian untuk dukungan suami berupa kuesioner yang diisi oleh ibu hamil dan untuk keteraturan ibu hamil dalam kunjungan ANC melihat dari buku KIA ibu hamil. Hasil penelitian diperoleh dukungan suami sebagian besar dengan dukungan sedang, sebanyak 33 responden (77 %). Keteraturan ibu hamil sebagian besar teratur sebanyak 36 responden (84 %). Hasil analisa data menggunakan *spearman rho* didapatkan 0,557, nilai signifikan (ρ value) = 0,000 dengan α 0,05. Kesimpulan: ada hubungan yang signifikan antara dukungan suami dengan keteraturan ibu hamil dalam kunjungan ANC trimester III di Puskesmas Kedungkandang Malang. Diharapkan keluarga terutama suami perlu meningkatkan dukungan untuk memotivasi ibu hamil dalam kunjungan ANC.

Kata kunci : dukungan suami, keteraturan kunjungan *antenatal care*, ibu hamil

ABSTRACT

Rosyidah, Ainur. 2019. The Correlation Between Husband's Support and Regularity of Pregnant Women in a Trimester III Antenatal Care (ANC) Visit at Kedungkandang Health Center Malang. Thesis of Program Study of Applied Bachelor of Midwifery Malang, Midwifery Departement, Health Politecnic of Ministry of Health Malang. Main Advisor: Erni Dwi Widyana, SST., M. Kes. Counselor Supervisor: Annisa, SST., M. Kes.

ANC is one of the important indicators for pregnant women during pregnancy. Regularity in ANC visits can detect early complications during pregnancy, so that they will be dealt with early. Husband's support for ANC regularity is very important to encourage routine pregnant women to conduct ANC visits regularly. The purpose of this study was to determine the relationship between husband's support and the regularity of pregnant women in the third trimester ANC visit at Kedungkandang Health Center Malang. This research method is analytic correlation with cross sectional approach. The sample of this study was 43 respondents with Purposive Sampling techniques from the entire population. Research instrument for husband's support in the form of a questionnaire filled out by pregnant women and for the regularity of pregnant women during ANC visits see from the KIA book pregnant women. The results of the study obtained most husband's support with moderate support, as many as 33 respondents (77%). The regularity of most pregnant women is 36 respondents (84%). The results of data analysis using spearman rho obtained 0.557, significant value (p value) = 0,000 with α 0.05. Conclusion: there is a significant relationship between husband's support and the regularity of pregnant women in the third trimester ANC visit at Kedungkandang Health Center Malang. It is expected that families, especially husbands, need to increase support to motivate pregnant women during ANC visits.
