Keywords: Attitudes, Informal Workers, JKN, Hadiluwih Village

Attitude is a form of reaction or response in the form of an individual's assessment of an object. The purpose of this study is to determine the attitude of informal workers who have not been registered in JKN membership towards the JKN program in Hadiluwih Village. The method used is descriptive quantitative research. The population in this study is 733 and the object of this study is 88 informal workers who have not been registered with JKN in Hadiluwih Village. The data collection technique is done by filling out a google form by informal workers who have not registered with JKN in Hadiluwih Village. Data were analyzed descriptively and presented in narrative form. The results of the research describe the attitude of informal workers who have not registered with JKN, namely informal workers who have not registered with JKN with a positive attitude (97%) and informal workers who have not registered with JKN with a negative attitude (23%). The conclusion of this research is that the majority of informal workers in Hadiluwih Village agree with the JKN program.
